EDUCATION AND CERTIFICATION

Full Stack Web Development (2019- 2020) Jose Portilla
Learnt HTML5, CSS3, JavaScript, jQuery, Bootstrap, Python, Django

SoloLearn (2020) Learnt SQL basics

Online and Video Tutorials (2019- date) Learnt Python, HTML5, CSS3, JavaScript, jQuery, Bootstrap, django, django restframework, Ajax, tkinter, web development (frontend and backend), MySQL, Postgresql, React Js

PERSONAL PROJECTS

- **Online Examination Hall (2021)**

    Designed and Developed the full front end and back end. Online examination hall is an online Computer- Based- Test (CBT) platform, especially for secondary school students, where questions can be posted and candidates can take exams. Features will be added to make it a complete school management web app.

    Technologies used: Python, django, HTML, CSS, Bootstrap, JavaScript, jQuery, Ajax, Postgresql
    Demo Link: http://cbtexamhall.herokuapp.com

Github: https://github.com/MayowaFunmi/online-exam-hall/

- **DREM International (2021)**
  The project is a website built for a religious organization, Destiny Rescue Mission (DREM) International. I designed and develop the full frontend and backend with all its features.
  Technologies used: Python, django, HTML, CSS, Javascript, Bootstrap, Postgresql
  Demo link: https://drem-international.herokuapp.com/
  Github: https://github.com/MayowaFunmi/drem-international/

- **Dependent/Dropdown of world's countries and states/provinces(2021)**
  The project is web based and a 3-in-1 project:first, a dependent dropdown of all countries in the world and their respective states/provinces/subdivisions. Second, a dependent dropdown of all states in Nigeria and their respective local government areas. Then third, a django rest API project to display all the data mentioned in first and second above, which can also be consumed by javascript frontend libraries.
  Technologies Used: python, django, django rest framework, HTML, little CSS, Javascript, Ajax
  Demo link: https://countries-states-dropdown-api.herokuapp.com/
  Github: https://github.com/MayowaFunmi/countries-states-dropdown/

- **My Shop (2020)**

  Designed and Developed the full front end and back end. My shop is an online ecommerce platform where goods and articles can be sold and bought.

  Technologies used: Python, django, HTML, CSS, Bootstrap, SQLite
  Link: https://github.com/MayowaFunmi/ecommerce-myshop/

- **MayowaBlog (2020-2021)**
  The project is a blog site with rich features including searching for posts, sitemap, category and tag functionalities, post sharing by email and on social media platforms, like and unlike post, etc. It's still very much in progress and not yet live on any server. Users can signup, login and write post on any topic of their choice.
  Technologies used: python, bootstrap, django, javascript, postgresql
  Github: https://github.com/MayowaFunmi/blogsite/

- **AdviseMe (2021)**
  This is a web based counselling app where students can seek for advise and counsel from counsellors by exchanging direct messages.
  Technologies used: python, Reactjs, django rest framework, Javascript, postgresql
  Github: Backend Api: https://github.com/MayowaFunmi/AdviseMe/
  Reactjs Frontend: https://github.com/MayowaFunmi/AdviseMe-reactjs-frontend/

- **My Portfolio App (2021)**
  This is my personal portfolio website developed using Reactjs as frontend and python django API as backend. It contains the url links to all the projects mentioned above.

Technologies used: python, Reactjs, django rest framework, Javascript, postgresql
Github: Backend Api: https://github.com/MayowaFunmi/my-portfolio-backend/
Reactjs Frontend: https://github.com/MayowaFunmi/my-portfolio-frontend/

- **Scientific Calculator (2019)**

  A desktop app developed using python library (tkinter)
